

SECOA Rope Lock

New Features for an All Time Favorite

P/N: 220-50000-1-0

SECOA has added new features to its already popular rope lock. New features make this rope lock the quietest and best operating rope lock ever.

Features:

- Housing has been enhanced allowing a pad lock to be used to either lock the rope lock open or closed. Locked closed prevents unauthorized use of the line set. Locked open prevents inadvertent locking of the rope lock for those facilities having multiple locking rails.
- Handle and Jaws are acoustically isolated from the housing by nylon washers.
- Adjustment bolt for the rope size has a nylon tip to quiet any metal on metal contact during operation.
- New rope lock housing is finished with a durable powder coating that reduces noise.
- Optional neoprene bumper cushions the rope lock handle when open to quiet operational chatter.
- Rope lock jaws are plastic dipped on the sides for quiet operation.
- Locking ring is plastic dipped to quiet any possibility of noise.

Benefits:

- This is the quietest operating rope lock SECOA has produced.
- Increased security by preventing unauthorized usage.
